

451PCBCOM (PCB) White Paper 1.0

451PCBCOM (PCB) is a Tron TRC20 Token used for open source hardware diffusion and distribution.

PCB token will be distributed to the community for support open source hardware.

100.000.000 units of 451PCBCOM (PCB) TRC20 tokens have been created with this smart contract address:

TJzcEaqqYk9g4jZLEsB2DksLGikM4dWwYJ

The Creator Address and the smart contract in the Tron Blockchain is under the control of 451PCB.COM which is a NON-Profit association for diffusion of open source hardware.

The PCB token will be distributed for reward our community supporters with tokens which can be hold or change for win community reputation and rewards as open source code and hardware.

The PCB token will be used for participate in our community of open source hardware supporters in the tron decentralized blockchain system of message boards, forums, chats, lists, file and code sharing, vote about decisions, etc.

All the token holders addresses and balances are public as the events of transfers, approvals, spenders or burnings.

To use this PCB token have a 5% of the necessary tron energy execution cost for the user and the other 95% of the energy cost is supported by the token creator for avoid spam and other security purposes.

Read the code PCB.sol and join us.
